

# 1 Exemplo 3. Aplicacións prácticas do Exemplo2

## 1.1 Sumario

- 1 Exemplo 3. Aplicacións prácticas do Exemplo2
  - ◆ 1.1 OBRIGATORIA LECTURA. ESCENARIO
  - ◆ 1.2 Recuperación dun Sistema Operativo GNU/Linux mediante unha Xaula chroot
    - ◇ 1.2.1 Recuperar a password de root
  - ◆ 1.3 Copiar o cartafol HOME de todos os usuarios
    - ◇ 1.3.1 Cliente Distribución GNU/Linux: Empregando o comando scp
    - ◇ 1.3.2 Cliente Windows: Empregando o comando pscp
  - ◆ 1.4 Transferir un ficheiro de forma segura
    - ◇ 1.4.1 Cliente Distribución GNU/Linux: Empregando o comando sftp
    - ◇ 1.4.2 Cliente Windows: Empregando o comando psftp

## 2 Exemplo 3. Aplicacións prácticas do Exemplo2

### 2.1 OBRIGATORIA LECTURA. ESCENARIO

#### NOTAS:

1. Todos estes exemplos son válidos unha vez feito o **Exemplo2**
2. No **Exemplo2** o disco duro a montar na distribución Live SystemRescueCD posúe unha distribución GNU/Linux a recuperar
3. Picar nas imaxes para velas no tamaño orixinal

### 2.2 Recuperación dun Sistema Operativo GNU/Linux mediante unha Xaula chroot

#### 2.2.1 Recuperar a password de root

Unha vez establecida a conexión co **Servidor SSH** proceder do seguinte xeito:

```
192.168.120.100 - PuTTY
login as: root
Using keyboard-interactive authentication.
Password:
root@sysrescuecd /root # fdisk -l

Disk /dev/sda: 5368 MB, 5368709120 bytes
255 heads, 63 sectors/track, 652 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Disk identifier: 0x00040bc1

   Device Boot      Start         End      Blocks   Id  System
/dev/sda1 *          1           622     4996183+   83  Linux
/dev/sda2            623           652     240975+    5  Extended
/dev/sda5            623           652     240943+    82  Linux swap / Solaris
root@sysrescuecd /root #
```

```
192.168.120.100 - PuTTY
root@sysrescuecd /root # mkdir recuperar
root@sysrescuecd /root # mount -t auto /dev/sda1 recuperar
root@sysrescuecd /root #
```

#### a. Ver a táboa de particións do equipo (fdisk -l).

Neste caso a distribución Linux ten 2 particións:

1. /dev/sda1: A partición / onde está montado todo o sistema de ficheiros.
2. /dev/sda5: A partición **swap** adicada ao espazo de intercambio.

#### b. Crear cartafol para acceder á información do disco duro /dev/sda

No cartafol creado, en /root, mediante o comando **mkdir recuperar** a partición do disco /dev/sda co comando:

**mount -t auto /dev/sda1 recuperar**

c. Montar o cartafol /dev dentro de recuperar/dev para poder ter acceso a todos os dispositivos recoñecidos pola distribución SystemRescueCD. Comando empregado: `mount --bind /dev recuperar/dev`

d. Montar o cartafol /proc dentro de recuperar/proc para poder ter acceso a todos os dispositivos recoñecidos pola distribución SystemRescueCD. Comando empregado: `mount --bind /proc recuperar/proc`

e. Crear a xaula chroot co comando `chroot recuperar /bin/bash`.

Con este comando creamos unha xaula: un entorno pechado para a distribución Linux dentro de recuperar, de tal xeito, que unha vez dentro da xaula soamente existe ésta, e dicir, soamente existe a distribución Linux a recuperar, xa non estamos traballando na SystemRescueCD.

f. Cambiar contrasinal root.

Mediante o comando `passwd root` cambiamos o contrasinal de `root`, `abc123`, como novo contrasinal de `root`

g. Co comando exit saimos da xaula chroot.

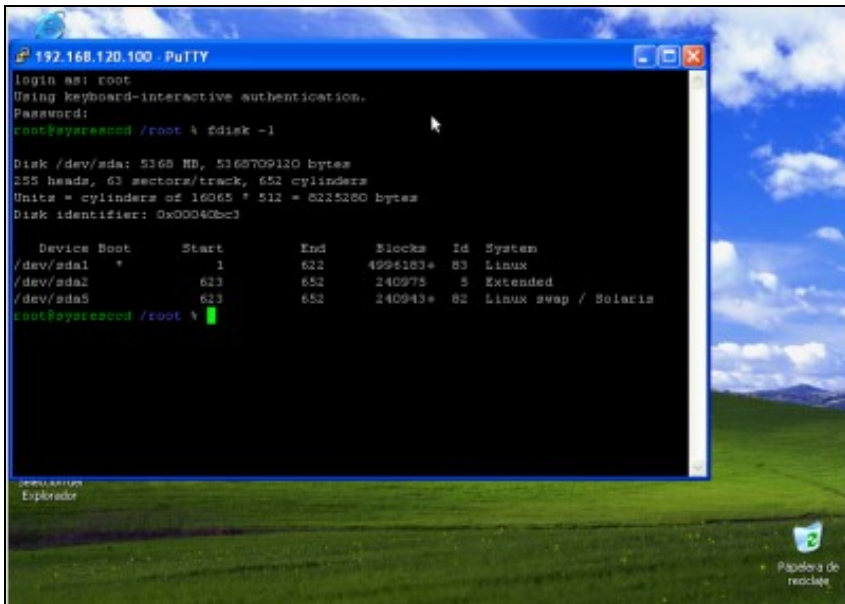

h. Desmontar unidades montadas:

1. umount recuperar/dev
2. umount recuperar/proc
3. umount recuperar

Apagar a SystemRescueCD e arrancar a distribución Linux recuperar para probar se funciona o contrasinal novo de root.

## 2.3 Copiar o cartafol HOME de todos os usuarios

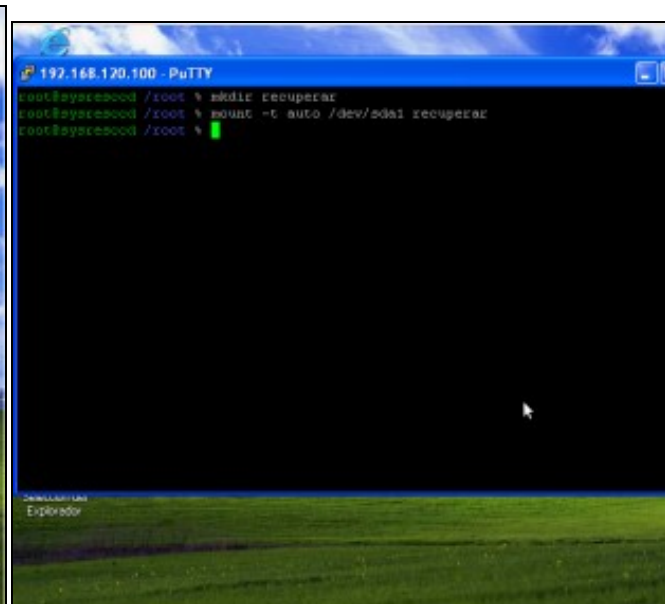

Unha vez establecida a conexión co Servidor SSH proceder do seguinte xeito:

a. Ver a táboa de particións do equipo (fdisk -l).

Neste caso a distribución Linux ten 2 particións:

1. /dev/sda1: A partición / onde está montado todo o sistema de ficheiros.
2. /dev/sda5: A partición swap adicada ao espazo de intercambio.

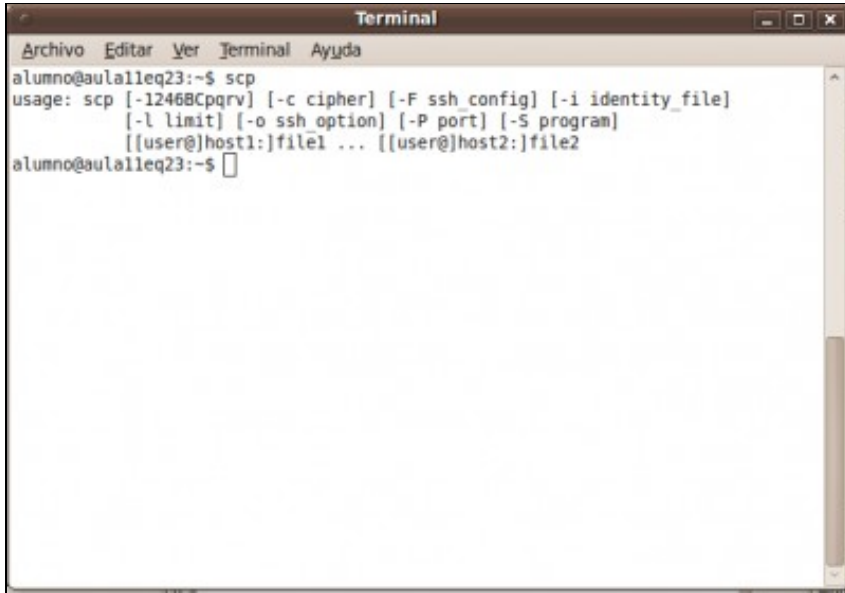

b. Crear cartafol para acceder á información do disco duro /dev/sda1.

No cartafol creado, en /root, mediante o comando **mkdir recuperar** e montar a partición do disco /dev/sda co comando:

**mount -t auto /dev/sda1 recuperar**

### 2.3.1 Cliente Distribución GNU/Linux: Empregando o comando scp

Proceder:

```
Terminal
Archivo  Editar  Ver  Terminal  Ayuda
alumno@aulal1eq23:~$ scp
usage: scp [-12468Cpqrvt] [-c cipher] [-F ssh_config] [-i identity_file]
          [-l limit] [-o ssh_option] [-P port] [-S program]
          [[user@]host1:]file1 ... [[user@]host2:]file2
alumno@aulal1eq23:~$
```

```
Terminal
Archivo  Editar  Ver  Terminal  Ayuda
alumno@aulal1eq23:~$ mkdir copia_home
```

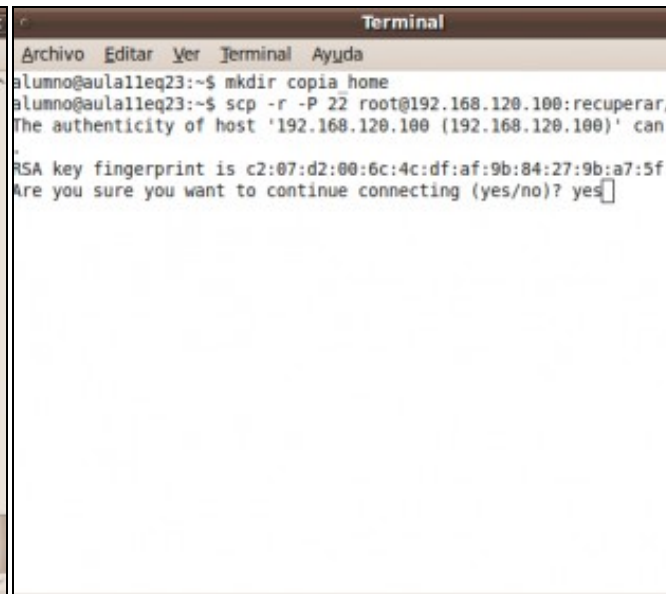

**a. Abrir un novo terminal para facer a copia mediante scp.**

Executando o comando **scp** podemos ver a sintaxe do mesmo.

**b. Crear o directorio destino da copia: copia\_home**

```
Terminal
Archivo  Editar  Ver  Terminal  Ayuda
alumno@aulal1eq23:~$ mkdir copia_home
alumno@aulal1eq23:~$ scp -r -P 22 root@192.168.120.100:recuperar/home copia_home/
```

```
Terminal
Archivo  Editar  Ver  Terminal  Ayuda
alumno@aulal1eq23:~$ mkdir copia_home
alumno@aulal1eq23:~$ scp -r -P 22 root@192.168.120.100:recuperar/
The authenticity of host '192.168.120.100 (192.168.120.100)' can
RSA key fingerprint is c2:07:d2:00:6c:4c:df:af:9b:84:27:9b:a7:5f
Are you sure you want to continue connecting (yes/no)? yes
```

**c. Copiar o HOME de todos os usuarios.**

Para copiar o HOME de todos os usuarios debemos empregar o comando scp como segue:

**scp -r -P 22 root@192.168.120.100:recuperar/home copia\_home**, onde:

1. **-r** significa recursivo, serve para copiar cartafols enteiros.
2. **-P 22** indica o porto de conexión SSH
3. **root@192.168.120.100** indica o usuario root na máquina 192.168.120.100
4. **:recuperar/home** indica o cartafol a copiar na ruta parcial recuperar/home, que ven sendo a ruta absoluta /root/recuperar/home, xa que no caso de non indicar a ruta absoluta sempre se parte da ruta da casa do usuario, neste caso o usuario é root, co cal páttese de /root
5. **copia\_home** é o cartafol destino da copia.

**d. Autenticación.** Se é a primeira vez que nos conectamos o servidoro estamos de acordo coa autenticación. Respostamos **yes** e pulsamos a primeira vez ver a seguinte imaxe.

```

Terminal
Archivo Editar Ver Terminal Ayuda
alumno@aula11eq23:~$ mkdir copia home
alumno@aula11eq23:~$ scp -r -P 22 root@192.168.120.100:recuperar/home copia_home/

The authenticity of host '192.168.120.100 (192.168.120.100)' can't be established.
RSA key fingerprint is c2:07:d2:00:6c:4c:df:af:9b:84:27:9b:a7:5f:31:10.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '192.168.120.100' (RSA) to the list of known hosts.

### 2.3.2 Cliente Windows: Empregando o comando pscp

NOTA: Para ver máis información sobre o comando pscp visitar a seguinte ligazón: [Comando pscp](#)

Proceder:

```

C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>cd Escritorio
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>pscp.exe
PuTTY Secure Copy client
Release 0.68
Usage: pscp [options] [user@]host[:source target]
pscp [options] source [source...] [user@]host[:target]
pscp [options] -ls [user@]host[:file:spec]

Options:
-U          print version information and exit
-pppfp     print PGP key fingerprints and exit
-p         preserve file attributes
-q         quiet, don't show statistics
-r         copy directories recursively
-v         show verbose messages
-load sessname Load settings from saved session
-P port    connect to specified port
-l user    connect with specified username
-pw passwd login with specified password
-I -2      force use of particular SSH protocol version
-A -6     force use of IPv4 or IPv6
-C         enable compression
-i key     private key file for authentication
-noagent   disable use of Pageant
-agent     enable use of Pageant
-batch    disable all interactive prompts
-unsafe   allow server-side wildcards (DANGEROUS)
-xftp     force use of SFTP protocol
-xcp      force use of SCP protocol

C:\Documents and Settings\Administrador.CLIENTE\Escritorio>

```

a. Abrir unha consola de comandos para facer a copia mediante pscp.

Executando o comando **pscp** podemos ver a sintaxe do mesmo.

```

C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>mkdir copia_home

```

b. Crear o directorio destino da copia: copia\_home

```

C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>pscp
PuTTY Secure Copy client
Release 0.68
Usage: pscp [options] [user@]host[:source target]
pscp [options] source [source...] [user@]host[:target]
pscp [options] -ls [user@]host[:file:spec]

Options:
-U          print version information and exit
-pppfp     print PGP key fingerprints and exit
-p         preserve file attributes
-q         quiet, don't show statistics
-r         copy directories recursively
-v         show verbose messages
-load sessname Load settings from saved session
-P port    connect to specified port
-l user    connect with specified username
-pw passwd login with specified password
-I -2      force use of particular SSH protocol version
-A -6     force use of IPv4 or IPv6
-C         enable compression
-i key     private key file for authentication
-noagent   disable use of Pageant
-agent     enable use of Pageant
-batch    disable all interactive prompts
-unsafe   allow server-side wildcards (DANGEROUS)
-xftp     force use of SFTP protocol
-xcp      force use of SCP protocol

C:\Documents and Settings\Administrador.CLIENTE\Escritorio>pscp -r -P 22 root@192.168.120.100:recuperar/home copia_home_

```

c. Copiar o HOME de todos os usuarios.

Para copiar o HOME de todos os usuarios debemos empregar o comando pscp como segue:

**pscp -r -P 22 root@192.168.120.100:recuperar/home copia\_home**, onde:

1. **-r** significa recursivo, serve para copiar cartafols enteiros.
2. **-P 22** indica o porto de conexión SSH
3. **root@192.168.120.100** indica o usuario root na máquina 192.168.120.100
4. **:recuperar/home** indica o cartafol a copiar na ruta parcial recuperar/home, que ven sendo a ruta absoluta /root/recuperar/home, xa que no caso de non indicar a ruta absoluta sempre se parte da ruta da casa do usuario, neste caso o usuario é root, co cal pártese de /root
5. **copia\_home** é o cartafol destino da copia.

```

C:\WINDOWS\system32\cmd.exe - pscp -r -P 22 root@192.168.120.100:recuperar/home c...
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>pscp -r -P 22 root@192.168.120.100:recuperar/home copia_home
WARNING - POTENTIAL SECURITY BREACH!
The server's host key does not match the one PuTTY has
cached in the registry. This means that either the
server administrator has changed the host key, or you
have actually connected to another computer pretending
to be the server.
The new rsa2 key fingerprint is:
ssh-rsa 2048 11:d4:49:ec:72:45:e5:39:ef:3c:46:09:9e:ca:7c:16
If you were expecting this change and trust the new key,
enter "y" to update PuTTY's cache and continue connecting.
If you want to carry on connecting but without updating
the cache, enter "n".
If you want to abandon the connection completely, press
Return to cancel. Pressing Return is the ONLY guaranteed
safe choice.
Update cached key? <y/n, Return cancels connection> y_

```

d. Autenticación. Se é a primeira vez que nos conectamos o servido estamos de acordo coa autenticación. Respostamos **y** e pulsamos **Enter** a primeira vez ver a seguinte imaxe.

e. Password da conexión do usuario root: toor. Pulsamos Enter

f. Copiando...

g. Copia feita

## 2.4 Transferir un ficheiro de forma segura

### 2.4.1 Cliente Distribución GNU/Linux: Empregando o comando sftp

Proceder:

```
Terminal
Archivo Editar Ver Terminal Ayuda
alumno@aulal1eq23:~$ sftp
usage: sftp [-lCv] [-B buffer_size] [-b batchfile] [-F ssh_config]
          [-o ssh_option] [-P sftp_server_path] [-R num_requests]
          [-S program] [-s subsystem | sftp_server] host
      sftp [[user@]host[:file [file]]]
      sftp [[user@]host[:dir[/]]]
      sftp -b batchfile [user@]host
alumno@aulal1eq23:~$
```

```
Terminal
Archivo Editar Ver Terminal Ayuda
alumno@aulal1eq23:~$ mkdir transferencia_dir
alumno@aulal1eq23:~$
```

a. Abrir un novo terminal para facer a transferencia de arquivos mediante sftp.

Executando o comando **sftp** podemos ver a sintaxe do mesmo.

b. Crear o directorio destino da transferencia: **transferencia\_dir**

```
Terminal
Archivo Editar Ver Terminal Ayuda
alumno@aulal1eq23:~$ mkdir transferencia_dir
alumno@aulal1eq23:~$ sftp root@192.168.120.100
```

```
Terminal
Archivo Editar Ver Terminal Ayuda
alumno@aulal1eq23:~$ mkdir transferencia_dir
alumno@aulal1eq23:~$ sftp root@192.168.120.100
Connecting to 192.168.120.100...
The authenticity of host '192.168.120.100 (192.168.120.100)' can't be
determined.
RSA key fingerprint is 11:d4:49:ec:72:45:e5:39:ef:3c:46:09:9e:ca:4d:11:
Are you sure you want to continue connecting (yes/no)? yes
```

c. Transferir o arquivo **/etc/passwd**.

Para transferir o arquivo **/etc/passwd** ao cartafol **transferencia\_dir** debemos empregar o comando sftp como segue:

**sftp root@192.168.120.100**, onde **root@192.168.120.100** indica o usuario root na máquina 192.168.120.100

d. **Autenticación**. Se é a primeira vez que nos conectamos o servidoro estamos de acordo coa autenticación. Respostamos **yes** e pulsamos a primeira vez ver a seguinte imaxe.

```

Terminal
Archivo Editar Ver Terminal Ayuda
alumno@aula11eq23:~$ mkdir transferencia_dir
alumno@aula11eq23:~$ sftp root@192.168.120.100
Connecting to 192.168.120.100...
The authenticity of host '192.168.120.100 (192.168.120.100)' can't be established.
RSA key fingerprint is 11:d4:49:ec:72:45:e5:39:ef:3c:46:09:9e:ca:7c:76.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '192.168.120.100' (RSA) to the list of known hosts.

2. **lcd**: Empregamos o comando **lcd** para movernos entre cartafol local, neste caso empregamos o comando **lcd transferencia\_dir** para movernos ao cartafol **/home/alumno/transferencia\_dir** do equipo local.

```
Terminal
Archivo Editar Ver Terminal Ayuda
sftp> get passwd
Fetching /root/recuperar/etc/passwd to passwd
/root/recuperar/etc/passwd          100% 1865    1.8KB/s  00:00
sftp>
```

```
Terminal
Archivo Editar Ver Terminal Ayuda
sftp> get passwd
Fetching /root/recuperar/etc/passwd to passwd
/root/recuperar/etc/passwd          100% 1865    1.8KB/s  00:00
sftp> quit
alumno@aula11eq23:~$
```

k. Transferimos o arquivo ao cartafol local, antes escollido, mediante o comando `get passwd`. Pulsar **Enter**. Transferencia realizada.

l. Executamos o comando `quit` para sair do cliente sftp e finalizamos a sesión.

```
Terminal
Archivo Editar Ver Terminal Ayuda
sftp> get passwd
Fetching /root/recuperar/etc/passwd to passwd
/root/recuperar/etc/passwd          100% 1865    1.8KB/s  00:00
sftp> quit
alumno@aula11eq23:~$ ls transferencia_dir/
passwd
alumno@aula11eq23:~$
```

m. Na consola cmd executamos o comando `ls transferencia_dir` e podemos observar que o ficheiro foi transferido satisfactoriamente..

#### 2.4.2 Cliente Windows: Empregando o comando psftp

NOTA: Para ver máis información sobre o comando psftp visitar a seguinte ligazón: [Comando psftp](#)

Proceder:

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Administrador.CLIENTE>cd Escritorio
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>psftp.exe -h
PuTTY Secure File Transfer (SFTP) client
Release 0.68
Usage: psftp [options] [user@]host
Options:
  -V          print version information and exit
  -pufpf     print PGP key fingerprints and exit
  -b file     use specified batchfile
  -bc        output batchfile commands
  -be        don't stop batchfile processing if errors
  -v         show verbose messages
  -load username Load settings from saved session
  -l user     connect with specified username
  -P port     connect to specified port
  -pw password login with specified password
  -i -2      force use of particular SSH protocol version
  -i -6      force use of IPv4 or IPv6
  -C         enable compression
  -i key     specify key file for authentication
  -noagent   disable use of Pageant
  -agent     enable use of Pageant
  -batch     disable all interactive prompts
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>
```

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>mkdir transferencia_dir
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>
```

a. Abrir unha consola de comandos para facer a transferencia de arquivos mediante psftp.

Executando o comando **psftp -h** podemos ver a sintaxe do mesmo.

b. Crear o directorio destino da transferencia: **transferencia\_dir**

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>mkdir transferencia_dir
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>psftp.exe -P 22 root@192.168.120.100
20.100
```

```
C:\WINDOWS\system32\cmd.exe - psftp.exe -P 22 root@192.168.120.100
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>mkdir transferencia_dir
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>psftp.exe -P 22 root@192.168.120.100
The server's host key is not cached in the registry. You have no guarantee that the server is the computer you think it is.
The server's rsa2 key fingerprint is:
ssh-rsa 2048 11:d4:49:ec:72:45:e5:39:ef:3c:46:09:9a:ca:7c:76
If you trust this host, enter 'y' to add the key to PuTTY's cache and carry on connecting.
If you want to carry on connecting just once, without adding the key to the cache, enter 'n'.
If you do not trust this host, press Return to abandon the connection.
Store key in cache? (y/n) y_
```

c. Transferir o arquivo **/etc/passwd**.

Para transferir o arquivo **/etc/passwd** ao cartafol **transferencia\_dir** debemos empregar o comando psftp como segue:

**psftp -P 22 root@192.168.120.100**, onde:

1. **-P 22** indica o porto de conexión SSH
2. **root@192.168.120.100** indica o usuario root na máquina 192.168.120.100

d. **Autenticación.** Se é a primeira vez que nos conectamos o servidor estamos de acordo coa autenticación. Respostamos **y** e pulsamos **Enter** a primeira vez ver a seguinte imaxe.

```

C:\WINDOWS\system32\cmd.exe - psftp.exe -P 22 root@192.168.120.100
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>mkdir transferencia_dir
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>psftp.exe -P 22 root@192.168.120.100
Using username "root".
Using keyboard-interactive authentication.
Password:
Remote working directory is /root
psftp>

```

e. Password da conexión do usuario root: toor. Pulsamos Enter

```

C:\WINDOWS\system32\cmd.exe - psftp.exe -P 22 root@192.168.120.100
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>mkdir transferencia_dir
C:\Documents and Settings\Administrador.CLIENTE\Escritorio>psftp.exe -P 22 root@192.168.120.100
Using username "root".
Using keyboard-interactive authentication.
