

1 Instalar servizo DNS (BIND9) Chrooted

Para instalar o servizo de DNS BIND9, faremos o seguinte:

```
yum install bind-chroot
```

A continuación, cambiaremos uns poucos permisos para o arranque de BIND:

```
chmod 755 /var/named/  
chmod 775 /var/named/chroot/  
chmod 775 /var/named/chroot/var/  
chmod 775 /var/named/chroot/var/named/  
chmod 775 /var/named/chroot/var/run/  
chmod 777 /var/named/chroot/var/run/named/  
cd /var/named/chroot/var/named/  
ln -s ../../ chroot  
chkconfig --levels 235 named on  
/etc/init.d/named start
```

BIND executarase a partir de agora dentro de /var/named/chroot/var/named/
