1.2 Purpose

Plantilla:TI is how you insert colorized text, such as `{{ safesubst:#if:`

```
| {{ safesubst:#if:
  | {{ safesubst:#ifeq: | yes
  | [[ {{ safesubst:#if:1| }}|{{ safesubst:#if:1| }}]]
  | [[|{{ safesubst:#if:1| }}]]
  }}
| {{ safesubst:#if:1| }}
}}
| {{ safesubst:#if:

}}, and many others. You can specify its {{ safesubst:#if: background

```

| {{ safesubst:#if:
  | {{ safesubst:#ifeq:  | yes
  | [[ {{ safesubst:#if:1| background  }}|{{ safesubst:#if:1| background  }}]]

  | [[ {{ safesubst:#if:1|  }} |{{ safesubst:#if:1| yellow  }}]]
  }}
| {{ safesubst:#if:1| yellow  }}
}}

```

}} color at the same time.

Plantilla:TI is also how you can color wikilinks to something other than blue for when you need to work within background colors. Normally [[**wikilink**]] **wikilink**, but here we use a **Plantilla:TI** with **Plantilla:Para** to create a black wikilink {{ safesubst:#if: **wikilink**

```

| {{ safesubst:#if: yes
  | {{ safesubst:#ifeq: yes | yes
  | [[ {{ safesubst:#if:1| wikilink  }}|{{ safesubst:#if:1| wikilink  }}]]
  | {{ safesubst:#if:1| wikilink  }}
  }}
| {{ safesubst:#if:1| wikilink  }}
}}
| {{ safesubst:#if: yes
  | {{ safesubst:#ifeq: yes | yes
  | [[ {{ safesubst:#if:1| violet  }} |{{ safesubst:#if:1| violet  }}]]
  | [[ {{ safesubst:#if:1| yes  }} |{{ safesubst:#if:1| violet  }}]]
  }}
| {{ safesubst:#if:1| violet  }}
}}

```

}} You can make any text link to any page using the **Plantilla:Para** parameter.

This template will use the latest [Wikipedia:HTML5](#) recommendations, inserting the span tags `Plantilla:Tag` and `Plantilla:Tag` for you, so your page increases its readability and usability in both the wikitext and the rendered page.

1.3 Usage

`Plantilla:Tif` has a one-color and a two-color form:

```
{{font color | color | text }}
{{font color | text color | background color | text }}.
```

Either form has a `|link=` option, for colorizing (otherwise blue or red) wikilink text.

```
|linkPlantilla=yes [[text]]
|link=fullpagename [[fullpagename]]
```

You can also name the other fields.

```
{{font color | fg=color | text=text }}
{{font color | fg=text color | bg=background color | text=text }}
```

You can name `|fg=` or `|bg=`, which is nice, but... if you name either of them, you must also name `|text=`, which is a compromise. (See [Help:Template#Parameters](#) for why.)

Spacing is of no concern.

```
.{{font color|tan|green|text with four words}}. .{{ safesubst:#if: text with four words
```

```
| {{ safesubst:#if:
| {{ safesubst:#ifeq: | yes
| [[ {{ safesubst:#if:1| text with four words }}|{{ safesubst:#if:1| text with four words }}]]
| [[|{{ safesubst:#if:1| text with four words }}]]
}}
| {{ safesubst:#if:1| text with four words }}
}}
| {{ safesubst:#if:

| [[ {{ safesubst:#if:1| }} |{{ safesubst:#if:1| green }}]]

}}.
