Create Bond... Delete Bond Rescan

Delete Bond

Are you sure that you want to delete Bond 0+1?

Deleting this bond will automatically transfer the management interface on the bond to the first slave member of the bond:

- XenCenter connections to the pool will temporarily be disturbed
- If your network configuration is incorrect then XenCenter may permanently lose the connection to the pool, or pool members may be unable to contact each other.

Delete bond anyway Cancel

New Network - xcp00

Choose the type of network to create

Select Type

Select the type of new network you would like to create:

  - External Network**  
Create a network that passes traffic over one of your VLANs.
  - Single-Server Private Network**  
Create a network that does not leave each XenServer host.  
This can be used as a private connection between VMs on the same host.
  - Cross-Server Private Network**  
Create a network that does not leave the XenServer pool.  
This can be used as a private connection between VMs in the pool.  
This type of network requires the vSwitch Controller to be running.
  - Bonded Network**  
Create a network that bonds together two or more of your NICs.  
This will create a single higher performing channel.
- 

New Network - xcp00

Enter a name and description for the new network

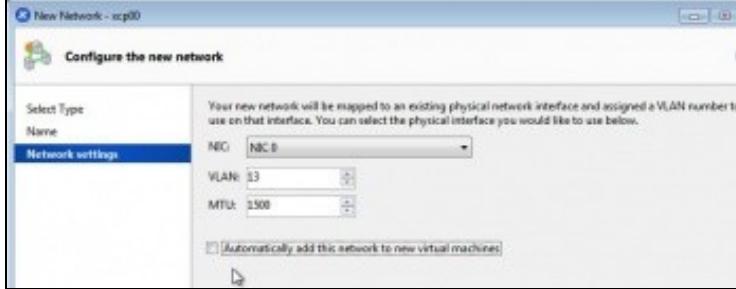

Select Type

Name

Network settings

Provide a name and optional description for the new network.

Name: **VLAN Probe**

Description:
- 

New Network - xcp00

Configure the new network

Select Type

Name

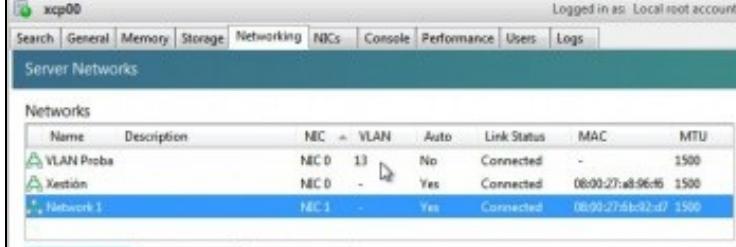

Network settings

Your new network will be mapped to an existing physical network interface and assigned a VLAN number to use on that interface. You can select the physical interface you would like to use below.

NIC: **NIC 0**

VLAN: **13**

MTU: **1500**

Automatically add this network to new virtual machines

- **GNU nano 2.2.4** File: /etc/network/interfaces

```
This file describes the network interfaces
and how to activate them. For more
information, see /usr/share/doc/networking-
documentation/nm-diagram.html

The loopback network interface
auto lo
iface lo inet loopback

The primary network interface
allow-hotplug eth0
#NetworkManager
iface eth0 inet dhcp

iface eth0 inet static
 address 192.168.13.2
 netmask 255.255.255.0
 gateway 192.168.13.1
```

A screenshot of the 'Networking' tab in the VM settings for 'xcp00'. It shows the 'Server Networks' section with four networks listed: 'Rede Interna (switch interno 1)', 'Xestión', 'Tráfico MVs', and 'Almacenamiento'. The 'Almacenamiento' network is selected. Below it is the 'IP Address Configuration' table:

| Server | Interface  | Network | NIC   | IP Setup | IP Address  |
|--------|------------|---------|-------|----------|-------------|
| xcp00  | Management | Xestión | NIC 0 | Static   | 10.42.0.200 |

A 'Configure...' button is visible at the bottom of the IP configuration table.

A screenshot of the 'Management Interface' configuration dialog. It shows the 'Management' interface assigned to the 'Xestión' network. The 'Use these settings' radio button is selected, and the IP configuration fields are filled with values: IP address: 10.42.0.200, Subnet mask: 255.255.255.0, Gateway: 10.42.0.1, Preferred DNS server: 10.42.0.1, Alternate DNS server 1: (empty), and Alternate DNS server 2: (empty).

A screenshot of the 'Storage 1' configuration dialog. It shows the 'Storage 1' interface assigned to the 'Almacenamiento' network. The 'Use these settings' radio button is selected, and the IP configuration fields are empty: IP address:, Subnet mask:, and Gateway:.

- Configure IP Addresses - xcp00
 

Configure IP address settings for server management traffic (the management interface) on 'xcp00' here. You can also assign IP addresses for dedicated storage or other types of network traffic (secondary interfaces).
