

doc

[Plantilla:Documentation subpage](#) [Plantilla:High-risk](#) [Plantilla:Notice](#)

This template trims whitespace from a string. The string should be passed as the first unnamed parameter. You may [substitute](#) this template - that is, if used as [Plantilla:TIxs](#), the resulting wikicode is "clean".

Sumario

- [1 Usage](#)
- [2 Example](#)
- [3 Template data](#)
- [4 See also](#)

Usage

<<trim|*text*>> = *text* with any leading or trailing whitespace removed.

Example

- <<Plantilla:TIx> produces << safesubst:{{ safesubst:#if:1| abc}}>

Template data

```
<<Plantilla:TemplateDataHeader <templatedata> {

    "description": "The template trims whitespace from a string.",
    "params": {
        "1": {
            "label": "String",
            "description": "The string to be trimmed of whitespace",
            "type": "string",
            "required": true
        }
    }
}

</templatedata>
```
